

Wireless Nurse Call System (Single Server System)

VisionLink Premier Nurse Call System offers the unique ability to meld many patient technology systems into one centralized system to provide patient focused care with superior facility management. It easily installs into any size facility, whether it is a single building or a 100 acre campus and come PRE-PROGRAMMED. It integrates with smoke and motion detectors, wandering patient door equipment, pocket pagers, wireless phones, two way radios, IPAD's, cell phones, central station monitoring and other software and hardware options. Its flexibility allows us to customize a system that will meet the needs of your facility now and grow with you as your requirements expand. With VisionLink you can provide improved safety for patients and staff plus managed freedom for your residents in a system that will never be outdated.

VisionLink Premier Standard Features

- Windows 7 Professional® Operating System
- [900 MHz spread spectrum technology](#)
- Fully supervised (self-testing)
- Alarm Calls reset at the source
- Low battery alert
- Password protection
- Visual/audible alarm prioritization
- User replaceable long-life battery
- Statistical reports package

Unique personal wireless transmitters - VisionLink Premier offers pendant transmitters unique in the industry for their ability to combine resident emergency signaling with automatic fall alarm and wandering patient notification that includes the patient's name and location. The built-in scheduler reminds caregivers to give medications, lock doors or perform other tasks. Best of all, no expensive licenses or upgrades are required to add more stations, staff notification devices or personal pendant transmitters at any time and no service contracts are required to support your system once installed. We feel a quality system should have free technical support on a toll-free number and that is exactly what we provide.

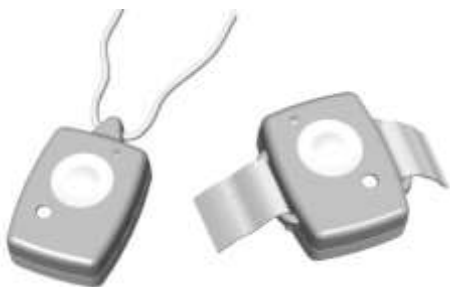

Additional Options (as needed)

- Advanced Statistical Call Analysis Reports
- Spectralink wireless phone integration
- Elopement Notification for Residents and Assets
- Locator Beacons
- Pocket page and text messaging
- Central station monitoring
- Cellular telephone alarm messaging
- Voicelink two way voice communication

Equipment Options

- Location, elopement and fall alarm transmitters
- Wireless code blue stations
- Wireless staff and resident emergency stations
- Corridor and Zone Lamps (white or four color)
- Custom sconce indicator lamps
- Alpha-numeric pocket pager & LED reader boards
- Central station alarm monitoring interface
- Telephone and cellular phone interface
- Cisco®, Spectralink®, Ascom & Panasonic interface
- Two way radio, email and PDA interface
- Networked consoles can select response areas
- Remote access for reports and programming
- Door/Window/Bed exit notification
- Wandering patient management
- Smoke/motion/glass breakage detection
- Active or passive resident check-in status
- Repeater/Locators for campus coverage
- Locator and Elopement beacons
- PC, server and desktop consoles

Even More VisionLink Premier Features

- Compatible with other call systems
- Pendant fall alarm & wander notification
- Internal & external batteries monitored
- Programmable call escalation
- Advanced management reports
- Silent text messaging
- Quality assurance verification
- Timed egress alarm notification
- Text messaging
- Staff presence indication
- Bed turn scheduler

VisionLink Premier Standard Components

- Emergency Pull Station
- Single Patient Station
- Dual Patient Station
- Pendant with "call cancel" button
- Duty Station
- Code Blue Station
- Corridor and Zone Lights
- Universal Transmitter
- Motion Detector
- Smoke Detector
- Water, Glass Break, Temp & More

Start small, think big!

The Vision Link Wireless Nurse Call System is engineered with the quality required for skilled and acute care combined with the ease of use needed by caregivers worldwide. It uses the Windows 7® operating system, [900 MHz spread spectrum](#) wireless technology and multiple wireless platforms to link your residents with your staff. Go wireless when adding a new wing or building and save on conduit and wiring costs. For dome lights just add a single two wire loop through the corridors. For a multi-building campus, add wireless repeaters to send assistance calls to the nearest console by day and a centralized console at night. Or choose our server option that allows you to manage all of your computer consoles from a central server whether you are on or off site.

Wireless Staff Mobility - Staff members can use IPADS, [Pocket Pagers](#), [Two Way Radios](#), wireless phones, or cell phones to receive alarm calls and even talk to the resident in the room hands free via our unique VoiceLink feature. The VisionLink system also provides text messaging. Not just patient alarms, but any message typed on a keyboard can be sent to any pocket pager, cell phone or group eliminating institutional overhead paging. Staff can be sent a text when calls are holding or any other information including mass notification for emergencies. VisionLink can additionally connect to any equipment that gives a contact closure on alarm. This provides notification from wandering patient systems, exit doors, smoke detectors, motion detectors, bed exit pads, incontinence pads, equipment status, or anything else your facility requires.

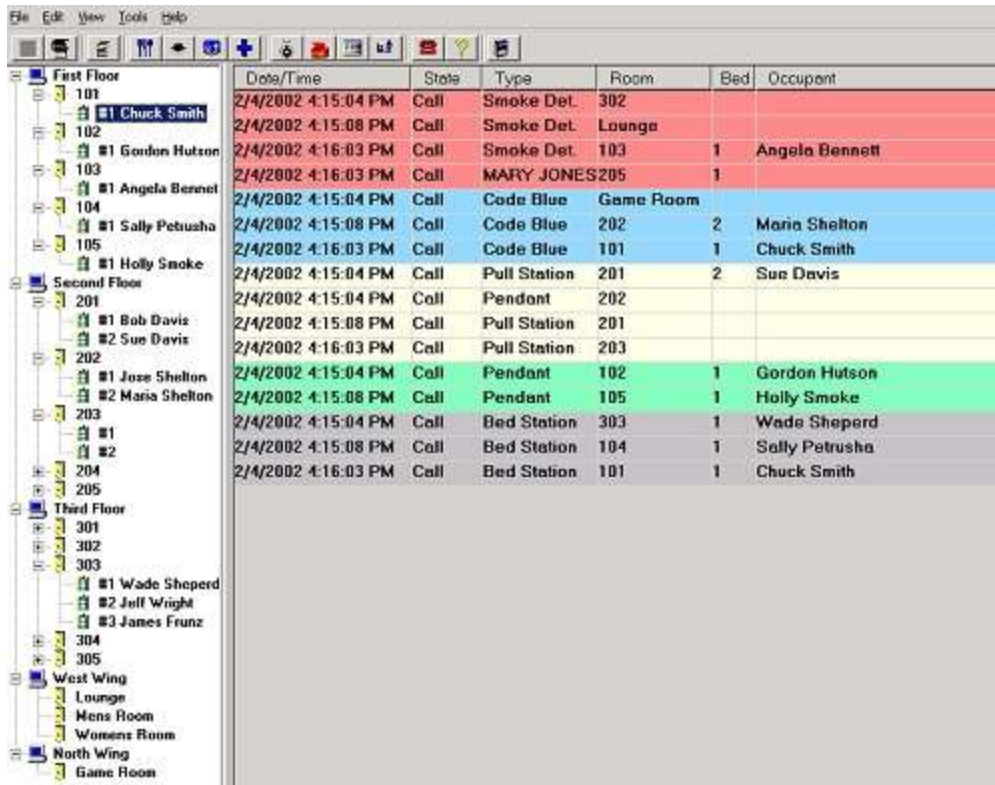

Wireless Nurse Call System advantages are:

- Wireless Nurse Call System's / Emergency Call System's Paging solution
- Option for a UL 1069 Edition 7 certification for hospital signaling and nurse call equipment
- Operates at [900MHz Spread Spectrum](#)
- Includes resident location down to the *room-level*
- Integrate nurse call and wireless fall management with optional silent, local alarm
- Wireless Emergency two-way intercom communication
- Instant alerts to nurse pagers & LED displays
- Easy system installation and expansion
- Wireless voice messaging throughout the facility
- Improved productivity and reduced maintenance costs

VisionLink Premier Standard Components

- Emergency Pull Station
- Single Patient Station
- Dual Patient Station
- Pendant with "call cancel" button
- Duty Station
- Code Blue Station
- Corridor and Zone Lights
- Universal Transmitter
- Motion Detector
- Smoke Detector
- Water, Glass Break, Temp & More

Flexible Software & Reports - Patient information is a standard feature as well as Call Analysis Reports that provide the tools to organize and analyze the patient call data including staff response times. Your choice of active or passive check-in can notify staff of any resident who is not up and around by your selected time each day. A scheduler reminds staff to give medications, lock doors or perform other tasks. Bed turn software notifies CNA's to turn their patients according to schedule.
